

SR-35 EVOLUTION

soilmec 
Drilling and Foundation Equipment

SR-35 EVO. Giant steps are what you take...

The-30-ton-class piling rigs are the ones that more than any others stand for Soilmecc.

Since 1995, when the first R-312 was produced, these compact, agile and yet powerful rigs have become the standard of reference in the field of ground engineering.

From Northwest Territories to Ghana, From Mexico City to Pisa leaning tower, these rigs have been virtually working in all latitudes tackling a variety of soils, rocks and weather conditions.

After more than 1500 units sold,
Soilmec is introducing a new step in the segment.

R-30 EVO

1500 units
sold in the last 25 years

Soilmec best selling rigs ever

From truck to pile in a blink.

The SR-35 EVO is a very fast machine, easy to operate, the best answer to those specialists who are looking for performance and agility on job sites. The rig maintains the distinctive design features that have made the fortune of the SR-30. The compact geometry of the base machine and the parallelogram system allows to rapidly shifting from transport to working configuration, keeping a large working radius and the possibility to drill large diameter piles.

The machine can be moved with the kelly bar still mounted on, hence drastically reducing the setup time.

Less than 30 minutes
from truck to pile.

Evolution on the outside. Revolution on the inside.

The SR-35 is installed with the latest generation Stage-V Diesel engines set up with the low idle control able to improve efficiency and mitigate noise pollution.

The selected engine is the Cummins B6.7.

It is an extremely powerful engine, it is efficient and flexible and finally helping the operator to easily deal with the most demanding jobs.

Compared to the SR-30, this **new engine allows 5% lower specific fuel consumption even by delivering up to 12% more power.**

The hydraulic and electric systems design follows the path which had already been drawn for the SR-30 and therefore Nos. of components are reduced in order to minimize energy losses, to ease maintenance and finally improving reliability.

The all new rotary-head features a **15% increased torque output through DMS regulation and a very high transmission efficiency.**

The electronic control of the hydraulic motor displacement brings advantages in terms of efficiency and effectiveness. When working in very hard rock the system provides all the torque available while adjust it at the minimum torque needed in case of easy soil.

Most important remain the fact that, during the drilling phase, the maximum possible speed is always used maximizing therefore the performance and the production rate.

Contemporary Piling Rig

The SR-35 EVO is a modern machine equipped with several accessories and devices designed to guarantee the highest level of connectivity, accessibility and safety.

The **DMS 4.0 system**, based on the IOT technology, enables to use the most advanced automatic functions lately developed by Soilmec:

Autodrilling, Autorotary, mast assisted lifting (*Soilmec patent*), automatic return to the hole center just to name some of the features which helps the operator work and increase his comfort during the working phases. The 12" DMS touch screen monitor is installed in the cab upper-right side corner leaving the operator with a perfect visibility on the drilling area.

The comfort and safety of the operator is one of the SR-35 main targets.

The features included are: cab's sliding door, air conditioning with control display, Radio and CD kit, FOPS protection, cab and excavation front light kit, bluetooth radio control for truck loading/unloading and operator side catwalk with handrails.

Soilmec & Comfort & Safety

Large Diameter Piles

Cylinder Crowd System

Extended Rathole version

LDP - Large Diameter Piles - CCS version

Operating weight w/o kelly bar ¹	32700 kg	72090 lb
Max pile diameter (tool in front of the mast)	1500 mm	59.06 in
Max pile diameter (tool below mast) ²	3000 mm	118.11 in
Working radius	3000 - 3500 mm	118 - 137.8 in
Tail swing radius	3857 mm	151.85 in
Max pile depth-friction kelly	56,7 m	186.02 ft
Max pile depth-locking kelly	45,4 m	148.95 ft
Max pile depth (c/w rathole kit) - friction kelly ³	63,4 m	208.01 ft
Max pile depth (c/w rathole kit) - locking kelly ³	50,9 m	166.99 ft

¹ with segmental mast option the weight is 500 kg (1102 lb) more c/w Tier3 engine 300 kg (661 lb) less

² only for auger tool

³ 1,1 m (3.6 ft) mast extension & 1500 kg (3307 lb) additional counterweight

Transport in LDP - CCS version

* c/w 1,3 m mast extension

Drilling depth with tool 1500 mm (4.9 ft) long

Always one step ahead

The high strength steel **segmental mast** engineered for this unit is composed by two elements linked by a flange. Such a design allows to shorten or to extend the mast according to the job site needs without removing the section linked to parallelogram system. The solution enables to rapidly convert the rig machine in to the LHR configuration.

7,5 m (24.6 ft) minimum operating height, multifunctionally and adaptability are therefore the main features.
